Result: Moderate Understanding

Transcript:

They wrote a map to become a jar developer

Of course, everyone wants to learn Java because in most of the industries, they are using Java

So how do you learn it? First, you have to understand the foundation or the fundamentals of Java, focus on the syntax, then n

In fact, yes, we have a concept of threads and exception as well, but then you have to learn the libraries, how to use external

One of the best frameworks to learn for Java is Spring Framework

And you can also explore the world of databases, and if you want to be an expert, make sure that you practice that every day

So if you're learning that in two months, make sure that you practice each and every concept every day
